

Executive Summary

Weekly Attribution Report

Solstice Cloud | Executive Summary

Reporting window: Jun 22, 2026 to Jun 28, 2026 (Asia/Kolkata)

Executive summary

Across Google Ads, Meta Ads and LinkedIn Ads, ₹36,976 of in-window spend produced 19.0 position-based attributed conversions across 19 opportunities with at least one resolved campaign touch. Blended True CAC was ₹1,946.11. Attributed pipeline for the specified Discovery, Demo Scheduled and Proposal stages was ₹2,692,052; Closed Won attributed revenue was ₹2,051,076.

Last-click comparison found five materially over-credited combinations and nine materially under-credited combinations. Fourteen of 19 included opportunities (73.68%) had multi-platform paid paths. Five combinations exceeded the 1.5× blended-CAC threshold of ₹2,919.16 and have optimization tasks in SCM.

Key metrics

Metric	Result	Interpretation
Total weekly spend	₹36,976	All three ad exports; INR source amounts
Attributed conversions	19.0	Every resolved opportunity contributes 100%
Blended True CAC	₹1,946.11	Spend ÷ 19.0 conversions
Attributed pipeline	₹2,692,052	Discovery, Demo Scheduled and Proposal only
Attributed revenue	₹2,051,076	Closed Won only
Cross-platform overlap	14 / 19 · 73.68%	Denominator: all opportunities with a resolved touch
Material credit flags	5 over · 9 under	Strictly more than 20% CAC difference
Underperformers	5 combinations	True CAC > ₹2,919.16; none met zero-conversion ₹50,000 rule

Attribution results

Attributed conversions by platform

Position-based multi-touch model | 19.0 total

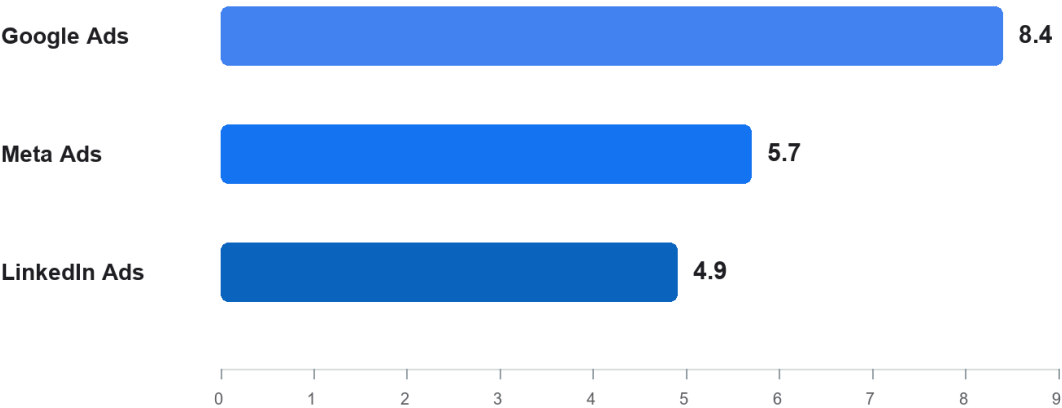

Figure 1. Position-based attributed conversions by platform.

True CAC versus last-click CAC

Finite materially divergent combinations | INR per attributed conversion

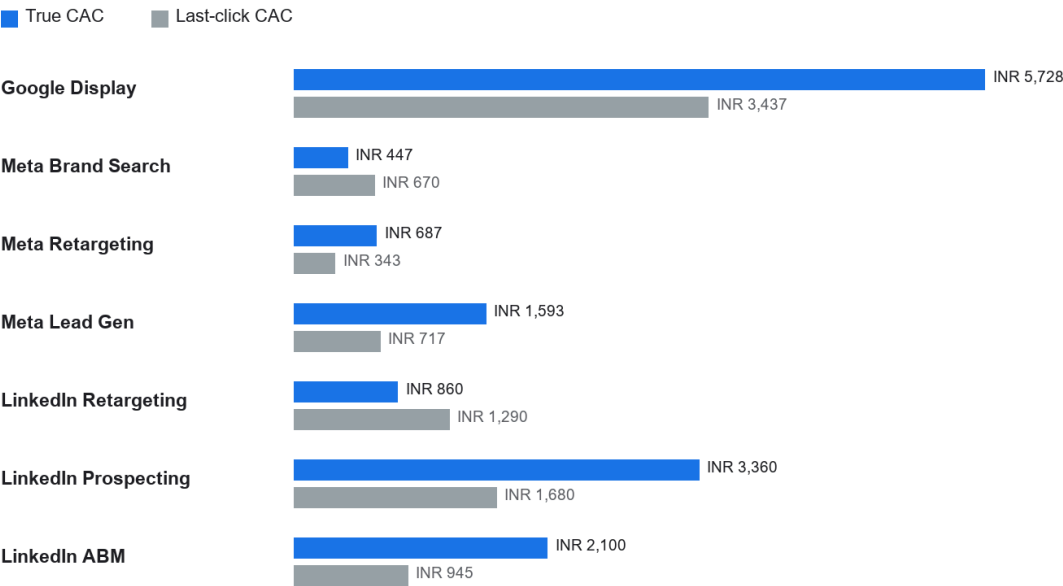

Figure 2. True and last-click CAC for combinations with finite, materially divergent CAC values. N/A last-click cases are shown in the recommendations below.

Budget reallocation recommendations

Changes are relative to current weekly spend. Every material over-credit flag receives a 10–20% reduction; every material under-credit flag receives a 10–20% increase. No combination exceeds a 20% change. Maximum under-crediting means last-click CAC is N/A while True CAC is real.

Combination	Last-click vs True CAC	Budget change	Rationale
Google · Competitor	N/A vs ₹4,672.00; maximum under-credit	+10% · ₹2,336 → ₹2,569.60	Audit resolution and query intent; cautious measured test.
Google · Display	₹3,437 vs ₹5,728.33; 40.0% lower	–20% · ₹3,437 → ₹2,749.60	Tighten placement, audience and landing-page tests.
Google · ABM	N/A vs ₹2,738.89; maximum under-credit	+15% · ₹2,465 → ₹2,834.75	Protect assisted account-path coverage; monitor quality.
Meta · Brand Search	₹670 vs ₹446.67; 50.0% higher	+15% · ₹670 → ₹770.50	Scale measured assisted brand paths.
Meta · Display	N/A vs ₹2,640.00; maximum under-credit	+15% · ₹1,848 → ₹2,125.20	Test incremental assisted reach with measurement controls.
Meta · Retargeting	₹343.33 vs ₹686.67; 50.0% lower	–15% · ₹1,030 → ₹875.50	Reduce last-click-heavy exposure; test incrementality.
Meta · Lead Gen	₹717 vs ₹1,593.33; 55.0% lower	–15% · ₹1,434 → ₹1,218.90	Rebalance away from apparent closing-credit concentration.
Meta · ABM	N/A vs ₹6,890.00; maximum under-credit	+10% · ₹1,378 → ₹1,515.80	Conditional account-quality and tracking test.
LinkedIn · Brand Search	N/A vs ₹1,520.00; maximum under-credit	+15% · ₹760 → ₹874.00	Preserve upper-funnel assisted coverage.
LinkedIn · Display	N/A vs ₹2,787.50; maximum under-credit	+15% · ₹2,230 → ₹2,564.50	Scale thought-leadership tests with path monitoring.
LinkedIn · Retargeting	₹1,290 vs ₹860; 50.0% higher	+15% · ₹1,290 → ₹1,483.50	Expand measured assists; validate downstream quality.
LinkedIn · Prospecting	₹1,680 vs ₹3,360; 50.0% lower	–20% · ₹1,680 → ₹1,344.00	Narrow account/seniority targeting and offers.

Combination	Last-click vs True CAC	Budget change	Rationale
LinkedIn · Lead Gen	N/A vs ₹2,742.86; maximum under-credit	+15% · ₹1,920 → ₹2,208.00	Protect guide-led assisted paths and test scale.
LinkedIn · ABM	₹945 vs ₹2,100; 55.0% lower	−15% · ₹1,890 → ₹1,606.50	Rebalance last-click-heavy account exposure.

Meta Prospecting is underperforming on absolute True CAC but has no material last-click credit flag (last-click CAC is 10.0% lower). Hold its ₹3,951 weekly budget during targeting, creative and measurement remediation, then reassess after a complete week.

Performance Analysis

Performance Analysis

Attribution approach

The reporting population includes opportunities created in the completed reporting window and earlier opportunities that reached Closed Won or Closed Lost during it. Ad spend, GA4 sessions and CRM records were limited to the window in Asia/Kolkata. All source spend and opportunity amounts were already denominated in INR; the applicable weekly FX table was available, so no conversion was required.

Paid touches were ordered by linked GA4 session timestamp, using Click ID against the platform export and the opportunity/contact linkage for session association. Direct, organic and nurture sessions without a paid campaign Click ID were not assigned campaign credit. GA4 rows explicitly marked Unresolved were dropped conservatively and logged in Operations, including three exact-ID contradictions with export rows. OPP-2020-JUN22 had no resolved campaign touch and was excluded from attribution, overlap and attribution-total validation.

Position-based weights are 100% for one touch, 50%/50% for two touches, and 40% first, 40% last and 20% divided equally among middle touches for longer paths. Attributed conversions sum weights across every included opportunity regardless of stage. Pipeline includes only Discovery, Demo Scheduled and Proposal; revenue includes only Closed Won. Negotiation and Qualification remain conversion-bearing but are outside the instructed pipeline-stage set. Last-click assigns 100% to the final resolved paid touch.

Position-based campaign-level CAC

Every Platform + Campaign Type combination with spend in the window appears below. Campaign name is retained because each combination maps to one campaign in this fixture.

Platform + Type	Campaign Name	Spend	Attr. Conv.	Attr. Pipeline	Attr. Revenue	True CAC
Google Ads · Brand Search	SC Search Brand India	₹921.00	2.50	₹0.00	₹5,06,456.00	₹368.40

CAC comparison and material credit flags

A combination is over-credited when last-click CAC is more than 20% lower than True CAC, and under-credited when it is more than 20% higher. N/A last-click CAC with real True CAC is maximum under-crediting. Equality at 20% is not material.

Platform + Type	True CAC	Last-click CAC	LC vs True	Classification
Google Ads · Brand Search	₹368.40	₹307.00	-16.7%	Aligned
Google Ads · Competitor	₹4,672.00	N/A - no attributed conversions	Maximum under-credit	Materially under-credited
Google Ads · Display	₹5,728.33	₹3,437.00	-40.0%	Materially over-credited

Audience overlap

14 of 19 resolved opportunities (73.68%) had paid touches from at least two platforms. Pairing counts below are co-occurrence counts; a three-platform opportunity contributes to each applicable pair.

Platform pairing	Opportunities
Google Ads + Meta Ads	9
Google Ads + LinkedIn Ads	7
LinkedIn Ads + Meta Ads	6

Opportunity attribution validation

Ordered resolved paid touches and position-based weights are shown below. Every included opportunity totals 100%. OPP-2020-JUN22 was excluded because its only click ID did not match a campaign export.

Opportunity ID	Ordered resolved campaign touches and weights	Total weight
OPP-2001-JUN22	Google Ads · Brand Search (100%)	100%
OPP-2002-JUN22	Google Ads · Competitor (50%) → Meta Ads · Lead Gen (50%)	100%
OPP-2003-JUN22	Meta Ads · Display (50%) → Google Ads · Retargeting (50%)	100%
OPP-2004-JUN22	Meta Ads · Brand Search (50%) → Google Ads · Prospecting (50%)	100%
OPP-2005-JUN22	Google Ads · Lead Gen (50%) → Meta Ads · Retargeting (50%)	100%
OPP-2006-JUN22	Google Ads · ABM (40%) → Meta Ads · ABM (20%) → LinkedIn Ads · ABM (40%)	100%
OPP-2007-JUN22	LinkedIn Ads · Brand Search (50%) → Google Ads · Brand Search (50%)	100%
OPP-2008-JUN22	LinkedIn Ads · Display (40%) → Meta Ads · Display (20%) → Google Ads · Display (40%)	100%
OPP-2009-JUN22	Google Ads · Retargeting (50%) → Meta Ads · Retargeting (50%)	100%
OPP-2010-JUN22	Google Ads · Prospecting (40%) → LinkedIn Ads · Lead Gen (20%) → Meta Ads · Prospecting (40%)	100%
OPP-2011-JUN22	Google Ads · Lead Gen (100%)	100%
OPP-2012-JUN22	Google Ads · ABM (50%) → LinkedIn Ads · ABM (50%)	100%
OPP-2013-JUN22	Google Ads · Brand Search (100%)	100%
OPP-2014-JUN22	Meta Ads · Prospecting (50%) → LinkedIn Ads · Prospecting (50%)	100%
OPP-2015-JUN22	LinkedIn Ads · Display (40%) → Google Ads · Display (20%) → Meta Ads · Lead Gen (40%)	100%
OPP-2016-JUN22	Meta Ads · Brand Search (100%)	100%
OPP-2017-JUN22	LinkedIn Ads · Retargeting (50%) → Meta Ads · Retargeting (50%)	100%
OPP-2018-JUN22	LinkedIn Ads · Retargeting (100%)	100%
OPP-2019-JUN22	LinkedIn Ads · Lead Gen (50%) → Google Ads · Lead Gen (50%)	100%

Operations

Operations

Underperforming campaigns and Jira tasks

The blended True CAC is ₹1,946.11; the underperformance threshold is 1.5×, or ₹2,919.16. Five combinations exceeded it. No combination had more than ₹50,000 spend with zero attributed conversions. Each task is unassigned and labelled marketing-optimization.

Platform + Type	Campaign Name	Spend	True CAC	Budget action	Jira
Google Ads · Competitor	SC Search Competitor Alternatives	₹2,336.00	₹4,672.00	+10% → ₹2,569.60	SCM-90
Google Ads · Display	SC Display Cloud Visibility	₹3,437.00	₹5,728.33	−20% → ₹2,749.60	SCM-91
Meta Ads · Prospecting	Tech Leaders Prospecting	₹3,951.00	₹4,390.00	Hold → ₹3,951.00	SCM-92
Meta Ads · ABM	Enterprise CIO ABM	₹1,378.00	₹6,890.00	+10% → ₹1,515.80	SCM-93
LinkedIn Ads · Prospecting	IT Director Prospecting	₹1,680.00	₹3,360.00	−20% → ₹1,344.00	SCM-94

Data-quality and methodology notes

- Four unresolved click IDs were excluded from attribution: gclid-SC-unresolved-001-JUN22 (GA4-S-0005 / OPP-2003-JUN22), gclid-SC-unresolved-002-JUN22 (GA4-S-0033 / OPP-2014-JUN22), fbclid-SC-unresolved-101-JUN22 (GA4-S-0043 / OPP-2019-JUN22), and gclid-SC-unresolved-003-JUN22 (GA4-S-0045 / OPP-2020-JUN22). The first three literal IDs appear in campaign exports, but GA4 explicitly marks their resolution as Unresolved; this contradiction was handled conservatively by dropping those touches. The fourth had no campaign-export match. OPP-2020 had no remaining resolved paid touch and was excluded completely.
- The warehouse schema did not contain a semicolon-delimited CRM touchpoint list or a separate Account Name field. CRM first/last click IDs and linked GA4 opportunity/contact session timelines were used to reconstruct ordered paid paths; Opportunity Name was the available entity label. The ad exports lacked the requested ad-group field, and GA4 supplied Key Event rather than a Converted Y/N field. These gaps are disclosed rather than filled with invented values.

- Some linked GA4 sessions occur after CRM Created Date. The analysis treated linked sessions in the reporting window, through close or the window end, as the observable journey for the opportunity. This is not a strict pre-creation lookback. Reused click IDs across distinct contacts/opportunities were mapped to their stable campaign, but remain an identity-quality risk.
- Conversions follow the requested opportunity-level weight sum irrespective of stage or the source attribution flag. Attributed pipeline includes only Discovery, Demo Scheduled, and Proposal; source Negotiation and Qualification opportunities therefore contribute conversions but not pipeline. Revenue includes Closed Won only. Closed Lost contributes neither pipeline nor revenue.
- All pulled spend and CRM amounts were already INR. Applicable weekly FX rows were available, and no missing-rate conversion was required. Direct, organic, and nurture sessions without a paid campaign click ID were excluded. No personal email or phone values were found in the pulled reporting rows, so no redaction was needed.

Run summary

Run date: Aug 4, 2026

Status: Complete. Read/write access was confirmed for the warehouse, report folder, Jira SCM project, and target Teams channel before reporting data was pulled.

The fixed Monday–Sunday IST window was used. All three ad platforms had spend. Twenty in-scope CRM opportunities were considered; 19 had resolved paid paths and were attributed. The position-based weights sum to 100% for each of those 19 opportunities. All 21 Platform + Campaign Type combinations with spend appear in both campaign-level tables.

Five unassigned marketing-optimization Jira Tasks were created: SCM-90, SCM-91, SCM-92, SCM-93, and SCM-94. No existing SCM issue for the same combination and reporting week was found during the pre-create check.

One Attribution Report Ready notification was sent to testing client workflows → Marketing Attribution Summary: [Teams message](#). The last 20 messages were requested; only 16 top-level messages were available. Their list and individual fetch bodies were blank in the connector, while scoped phrase and window searches returned no matching result with a restrictive-query indicator. No matching duplicate was observed; one post was sent, and this read limitation is disclosed here.

One completion row was appended to the warehouse Run Log with the reporting dates, report link, Jira keys, and Teams notification status.
