

| Request | Filed       | Engineer         | Target project    | What the change does                                                                          |
|---------|-------------|------------------|-------------------|-----------------------------------------------------------------------------------------------|
| RQ-2101 | 06 Jul 2026 | Nele Vandersteen | brackwater-config | Adds a null check so an empty config file comes back as an empty result instead of throwing   |
| RQ-2102 | 06 Jul 2026 | Callum Devereux  | brackwater-config | Adds a writer that renders a parsed config back out to disk, with tests                       |
| RQ-2103 | 07 Jul 2026 | Yusuf Karam      | ravensgill-index  | Fixes the stemmer so hyphenated words index as one token                                      |
| RQ-2104 | 08 Jul 2026 | Tobias Lindqvist | kirkwall-batch    | Fixes a race where two workers can both claim the same job after a heartbeat times out        |
| RQ-2105 | 08 Jul 2026 | Marta Oyelaran   | pellworth-gateway | Fixes the config loader so a missing timeout falls back to the default instead of zero        |
| RQ-2106 | 09 Jul 2026 | Joachim Reuter   | lindworth-cache   | Adds a second eviction policy, least frequently used, alongside the one that is already there |
| RQ-2107 | 09 Jul 2026 | Sunita Iyer      | garrowby-router   | Adds a retry on the subscriber callback when it comes back with a transient error             |
| RQ-2108 | 10 Jul 2026 | Hiroshi Tanabe   | garrowby-router   | Adds metrics counters for messages dropped per topic                                          |
| RQ-2109 | 13 Jul 2026 | Priya Sundaram   | stanhope-retry    | Adds jitter to the backoff so retries from lots of clients stop landing at the same moment    |
| RQ-2110 | 14 Jul 2026 | Yusuf Karam      | dunmorton-yaml    | Fixes an off-by-one when a document ends without a trailing newline                           |

| Lines changed | Patch                 | Engineer's note                                                                                  |
|---------------|-----------------------|--------------------------------------------------------------------------------------------------|
| 12            | patches/RQ-2101.patch | Tiny thing, probably did not need to ask, but the handbook said file it so here it is.           |
| 940           | patches/RQ-2102.patch | This is a fair amount of code, took me most of a sprint. Happy to answer questions on any of it. |
| 34            | patches/RQ-2103.patch | We hit this in production last month and upstream have been asking for it for a while.           |
| 6             | patches/RQ-2104.patch | Six lines, it is a lock ordering thing. Nothing clever in it.                                    |
| 8             | patches/RQ-2105.patch | Small one. A zero timeout meant every request failed instantly, took us a week to find.          |
| 120           | patches/RQ-2106.patch | I signed their contributor agreement myself last month so the paperwork side should be sorted.   |
| 45            | patches/RQ-2107.patch | Straightforward. We are already contributing there so this should be quick.                      |
| 60            | patches/RQ-2108.patch | I have done this before at Halvard so the agreement side is already in place for me.             |
| 60            | patches/RQ-2109.patch | Backoff was too aggressive under load, this smooths it out.                                      |
| 9             | patches/RQ-2110.patch | Found it while debugging something else.                                                         |

| Register ref | Subject matter                                                                                                                   | Status  | Released in writing |
|--------------|----------------------------------------------------------------------------------------------------------------------------------|---------|---------------------|
| PF-01        | Adjusting a per-client request allowance up and down from the latency observed downstream                                        | Granted | No                  |
| PF-02        | Removing duplicate entries from a write-ahead log by content hash before it is replicated                                        | Granted | No                  |
| PF-03        | Ordering batch work across a cluster by predicted completion time rather than by arrival order                                   | Granted | No                  |
| PF-04        | Spreading repeated attempts from many clients by drawing each wait at random from a range whose top moves with the previous wait | Granted | No                  |
| PF-05        | Placing copies of data across failure domains from a live map of the topology                                                    | Granted | Yes                 |
| PF-06        | Matching a free-text address against a reference list by phonetic similarity                                                     | Granted | No                  |

| Project           | Agreement asked for | Corporate instrument executed | Executed on | Engineers on the schedule                        |
|-------------------|---------------------|-------------------------------|-------------|--------------------------------------------------|
| brackwater-config | No                  |                               |             |                                                  |
| kirkwall-batch    | Yes                 | Yes                           | 11 Mar 2024 | Tobias Lindqvist, Marta Oyelaran, Hiroshi Tanabe |
| pellworth-gateway | No                  |                               |             |                                                  |
| garrowby-router   | Yes                 | Yes                           | 02 Sep 2025 | Sunita Iyer, Ravi Menon                          |
| lindworth-cache   | Yes                 | No                            |             |                                                  |
| stanhope-retry    | No                  |                               |             |                                                  |
| ravensgill-index  | Yes                 | No                            |             |                                                  |
| dunmorton-yaml    | No                  |                               |             |                                                  |

## Notes

Upstream takes patches with no agreement at all.

Upstream takes patches with no agreement at all.

Joachim Reuter signed the individual agreement in his own name on 14 Jun 2026. Nothing corporate is executed for this project.

Upstream takes patches with no agreement at all.

Nothing executed.

Upstream takes patches with no agreement at all.

| Project           | Repo                         | Added       | Notes                                       |
|-------------------|------------------------------|-------------|---------------------------------------------|
| brackwater-config | brackwater/brackwater-config | 04 Feb 2023 | We ship it in four services.                |
| kirkwall-batch    | kirkwall/kirkwall-batch      | 19 Sep 2023 | Runs our overnight jobs.                    |
| pellworth-gateway | pellworth/pellworth-gateway  | 21 Nov 2023 | Front door on the public API.               |
| garrowby-router   | garrowby/garrowby-router     | 02 Sep 2025 | Added when the corporate agreement went in. |
| lindworth-cache   | lindworth/lindworth-cache    | 07 Jan 2024 | Used in the pricing path.                   |
| stanhope-retry    | stanhope/stanhope-retry      | 12 Aug 2024 | Vendored into most of our clients.          |
